

Enhancing Medication Management for Seniors

ROCKET
TURTLE

Problem Statement

Problem Statement

Medication management is
challenging for seniors.

The image shows an elderly man with white hair, wearing a blue button-down shirt, sitting at a table. He is looking down at several medication bottles and a small container of pills. His hand is near his face, and he appears to be in a state of confusion or difficulty managing his medications. The background is a bright, out-of-focus indoor setting.

Problem Statement

Medication management is challenging for seniors.

Seniors' poor medication management leads to adult children's worries, and stress.

SEE BACK 2

Interviewing Seniors

OBSERVATION

Potentially taking twice as much medication as prescribed.

Interviewing Seniors

OBSERVATION

Potentially taking twice as much medication as prescribed.

Managing a less independent spouse's medications can be a full time job.

Primary Persona: Elderly Individual

Harry Baldwin (81)

Lives in Independent
Living Center

Has children &
grandchildren in the NE

Manages 4 medications
for himself

Cognitively can handle
management of
medication

Family members are
always concerned about
adherence and call to
check in

Primary User's Needs List

- ▶ To **open** medication containers easily
- ▶ To read / receive medication **information** clearly and easily
- ▶ To require **minimal data input** from the user
- ▶ To be **reminded** when it is time to take medication
- ▶ To **easily know** if medication has already been taken
- ▶ To know if any medications have **adverse interactions**
- ▶ To know **when to order** prescription refills
- ▶ To have items that are **visually pleasing** and integrate into home environment
- ▶ To **feel in control** over his/her own medication management

Secondary Persona: Caregiver

Allison Garrison (57)

Daughter of Harry Baldwin.

Lives in a different state

Very concerned about her dad taking medication

Knows that her dad can handle for the most part but calls daily to check.

Coordinates with doctor on prescriptions, and finds herself stressed organizing complicated medication information

Secondary User's Needs List

- ▶ To be able to **trust** seniors managing their own medication
- ▶ To have **reasonable access and knowledge** of seniors' medication list, changes, adherence and management
- ▶ To **know when to intervene or “nudge”** seniors
- ▶ To **know how to help** (for refills, doctor's visits, etc.)

Compartment Details

Usability

- ▶ Clickable buttons are placed on the lower side of each page
- ▶ Main Screen button is always on the lower middle
- ▶ Buttons are all identical colors
- ▶ Font reasonably sized above 16pts
- ▶ Break information or progressive disclosure
- ▶ Color alone should not be used to convey message
- ▶ Limited zoom and scroll interactions
- ▶ Minimize manual type input

Step 2 of 5

Potential Users

POTENTIAL USERS FEEDBACK

Usability

- Overall pleasing and useful product
- Found UI/UX very easy to navigate between pages
- Displayed contents were comprehensible and relevant to the users

Features

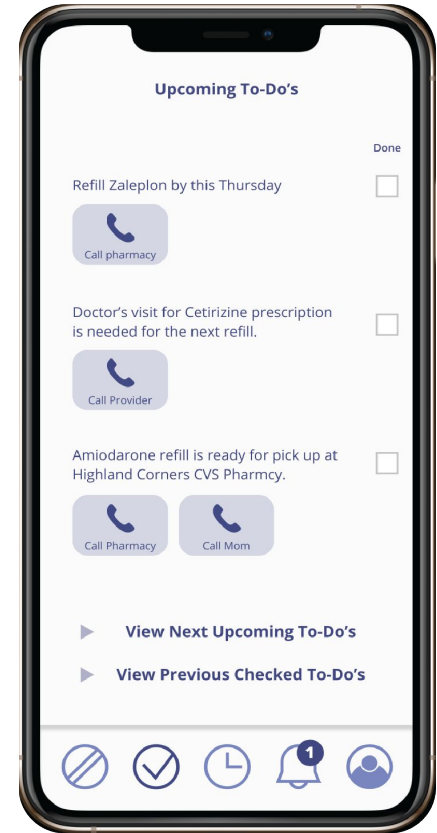

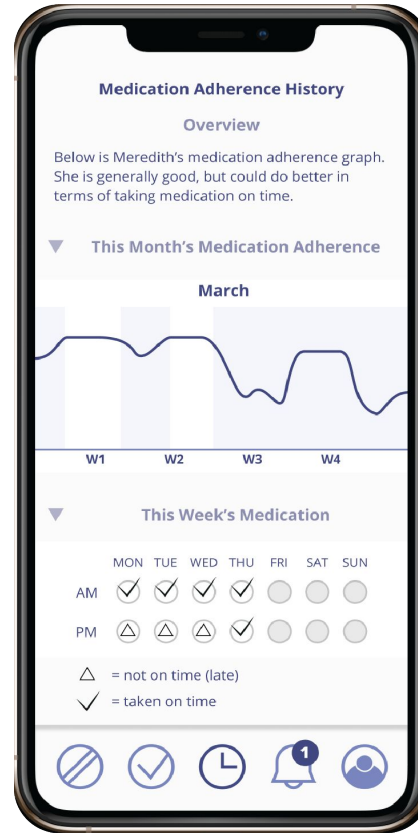

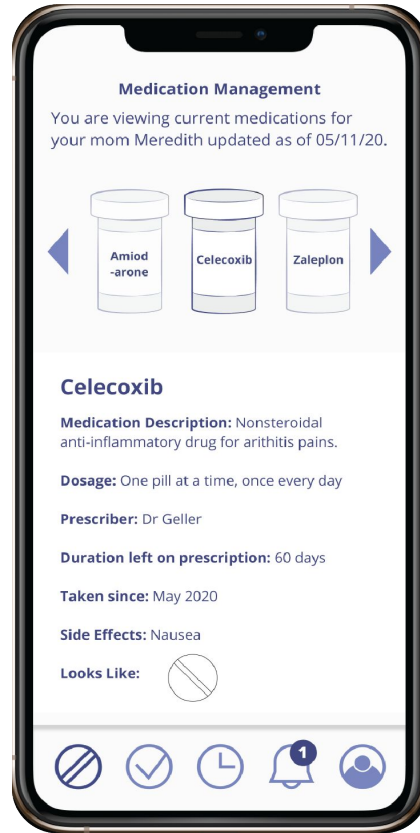

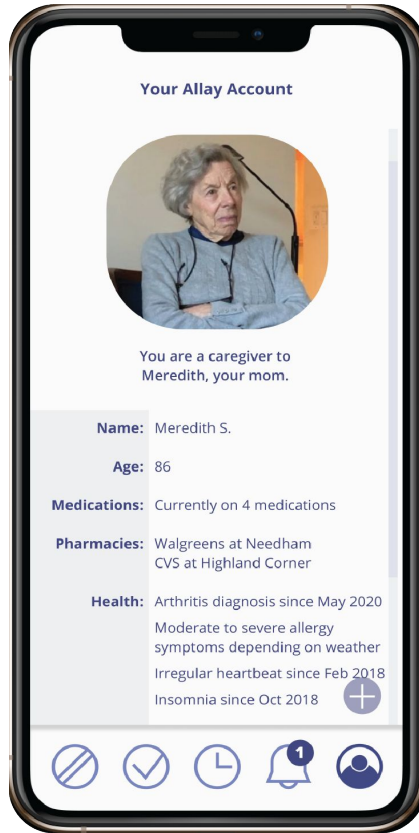

- Scanning feature was favored

Suggestions

- Additional audible features for users who may need the extra guidance
- Blister pack compatibility
- Pill bottle storage consideration

Caregiver Interface

ADULT CAREGIVER FEEDBACK

Overall

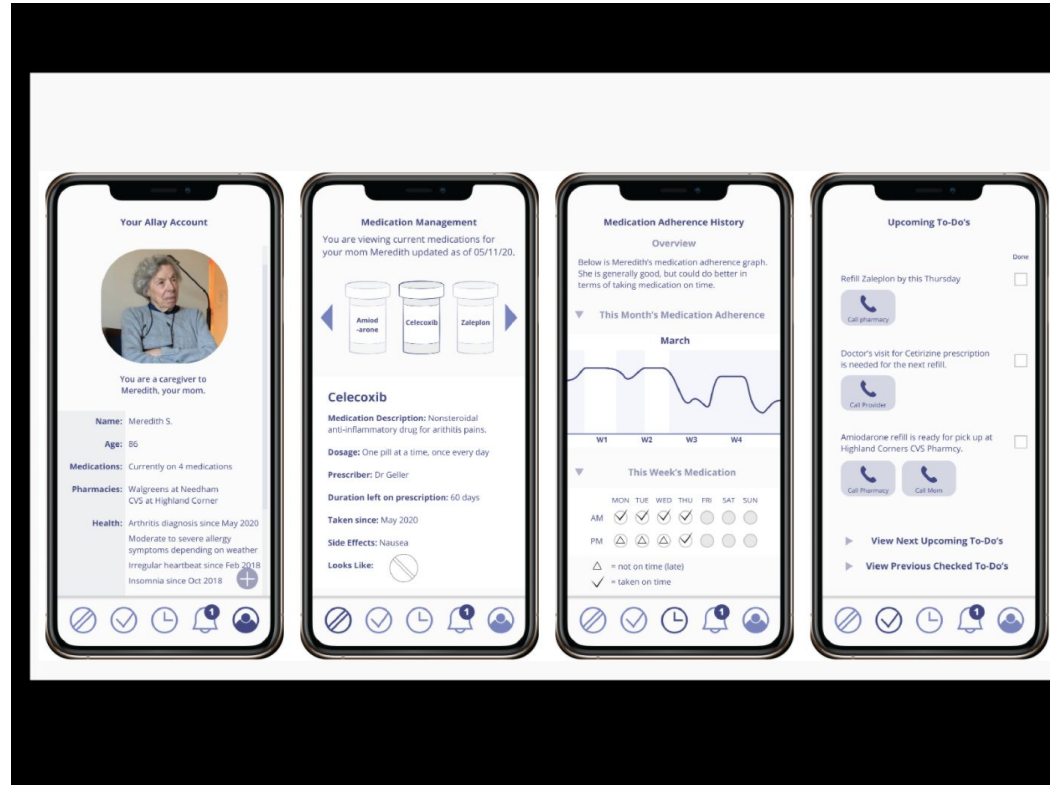

- Would have loved to use it when her mother was independently managing her pills
- Give peace of mind for caregivers
- High willingness to pay

Displayed Content

- Medication Details are fantastic and very useful to reference

UI/UX

- Visualization of adherence tracking is incredible
- Likes that user can show doctors adherence history and reduce friction during checkups
- Finds caregiver app feature to be very useful

AGELAB RESEARCHER FEEDBACK

Form Factor

- Great that it is familiar for the elderly population.
- Aesthetically pleasing unlike other pill organizers products

Notification

- Good use of ambient features, lighting & aural cues.

Features

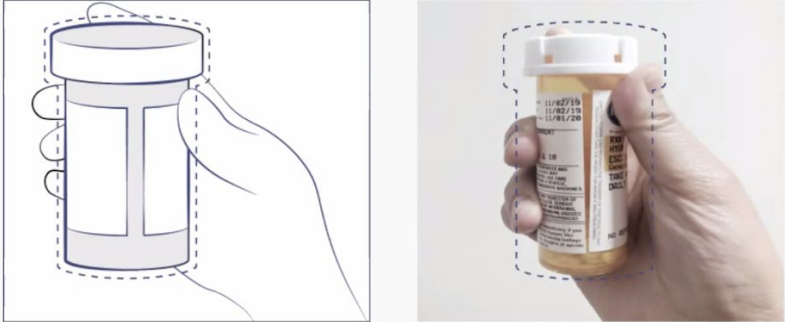

- Scanning features is convenient.

Suggestions

- Slight concern on elder dexterity and use of upright touchscreen display.
- Maybe consider failure modes
- Organizer may need more slots than AM & PM.

Step 1 of 2

Please show the camera your pill bottle.
Fill the dotted area as shown.

The diagram on the left shows a hand holding a pill bottle, with a dashed rectangle indicating the area to be scanned. The photo on the right shows a hand holding a pill bottle, with a dashed rectangle indicating the area to be scanned.

RETIREMENT COMM. DIRECTOR OF NURSING FEEDBACK

Technology Adoption

- Elderly use of electronics dependent on their cognitive and physical abilities
- Believes family member preparing medication could be a very compelling opportunity

Behavioral Change

- Give elderly users appropriate independence & decision-making authority over their daily habits
- Family members & doctors have the most influence over elderly actions and behavior change

User Test Takeaway

- ▶ Overall positive feedback on UI/UX
- ▶ Scanning feature was favored
- ▶ Blister pack insert might work well for people who use blister pack
- ▶ Audible features might work better for some users
- ▶ Pill bottle storage consideration might be nice

Manufacturing Workflow

STEP 1

Quality check parts sourced from China.

STEP 2

Adhere veneer to exterior of
injection molded base
(1 min)

Fix electronics in lid casing
(1 min)

Attach lid face-plate
(1 min)

Fix electronics, p/c board into
base, and run wires to base
(1 min)

Set pill compartment into
bottom casing
(1 min)

Attach lid to base
(1 min)

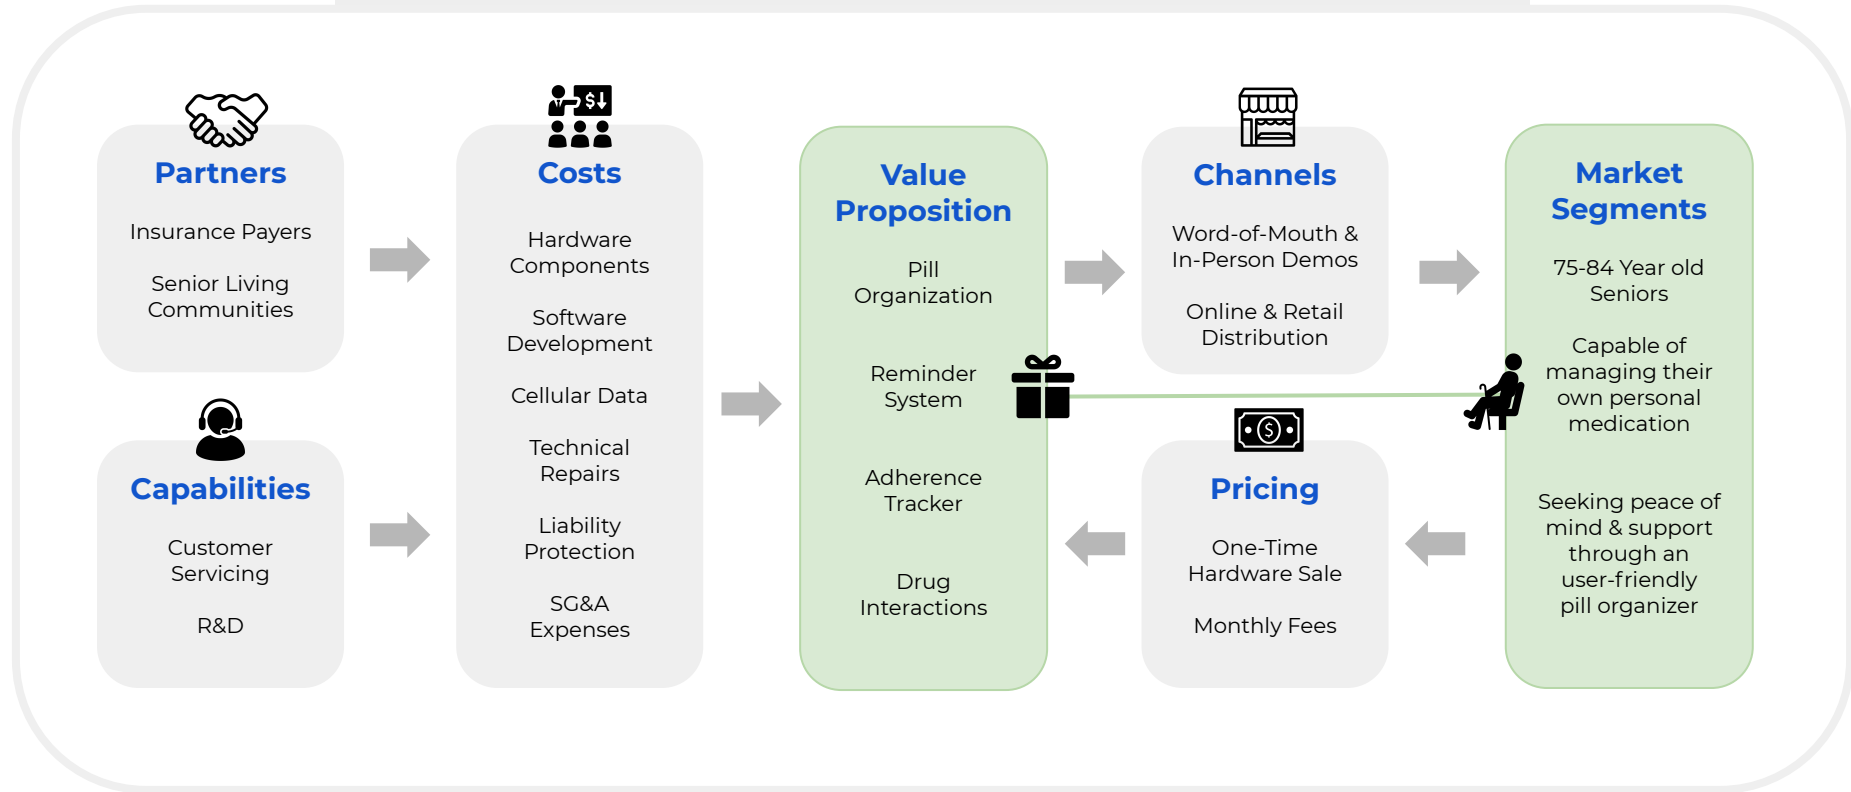

== 8 mins to produce 1 product

STEP 3

Quality check once every 15 products. (10 min)

7 (workers) X 8 (hours) X 3 (dollars) = \$168 to make 420 products/day

Key Stakeholders

PATIENT

Elderly User with Chronic Illness

Role: Prescription drug user

Incentive: Maintain good health

PAYERS

Aetna, Cigna, Medicare

Role: Provide insurance coverage

Incentive: Minimize reimbursements

PHARMACY

Walgreens, Rite Aid, CVS

Role: Last mile Distribution

Incentive: Refill rates

PHARMACY BENEFITS MANAGER

Caremark, Express Scripts

Role: Maintain formularies

Incentive: Manufacturer rebates

WHOLESALER

McKesson, Cardinal Health

Role: Distribute drugs

Incentive: Delivery points & high volumes

DRUG MANUFACTURER

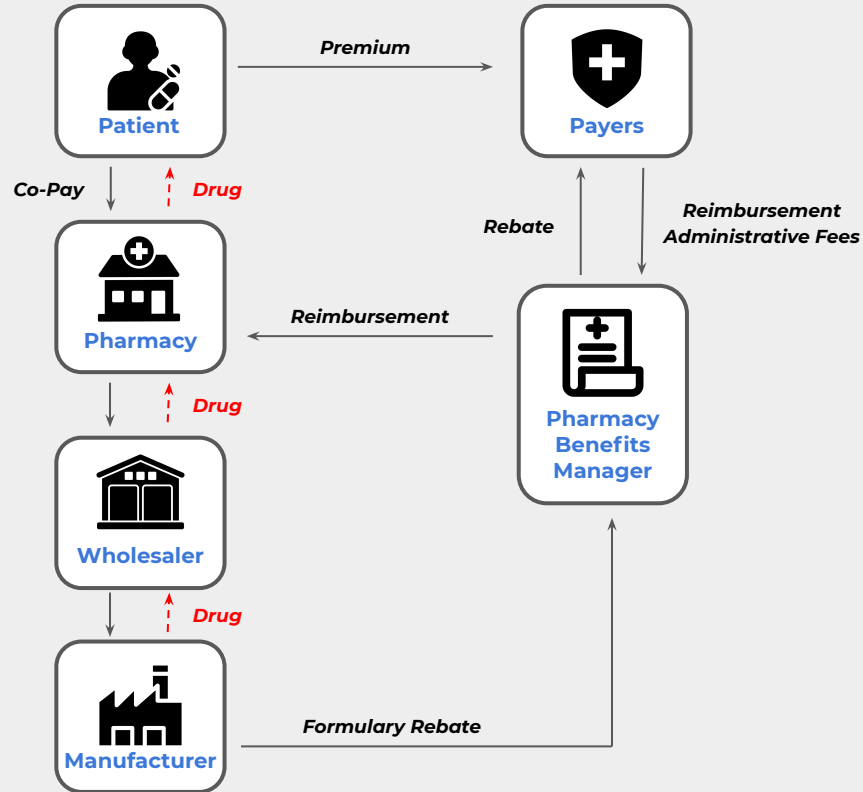

Genentech, Pfizer, Sanofi

Role: Develop drugs

Incentive: Effective treatment

Prescription Drug Supply Chain

"We would look for YOY data to demonstrate any changes in the group vs the control study group. Usually done internally. Also good to have peer reviewed literature that might have been submitted."

Lori Collins, CVS Payor Relations

For the study, **researchers identified 186 adults** from Intermountain Healthcare cardiovascular clinics who had a statin prescription and were also enrolled in Intermountain SelectHealth insurance.

Nudges were personalized using machine learning techniques based on the patient's psychographic profile (e.g., their perspectives, impressions, and opinions about healthcare) and their health status and needs.

Researchers found that **patients who received nudges were more likely to take their medications and had a higher percentage of the proportion of days covered (80%)**, meaning that they had better adherence to their prescribed statins.
